

Web Ontology Language implementation of ISO 19160-1:2015 Addressing

This is a [Web Ontology Language \(OWL\)](#) version of ISO 19160-1:2015 Addressing.

This ontology is a re-delivery of the ISO TC211, Group for Ontology Management (GOM)'s OWL ontology interpretation of the ISO19160-1:2015 "Addressing -- Part 1: Conceptual model" standard (see <https://www.iso.org/standard/61710.html>) taken from that ontology's source code, published at https://github.com/ISO-TC211/GOM/tree/master/isotc211_GOM_harmonizedOntology/19160-1/2015.

This version uses different URIs for the ontology since the original ontology's URIs do not resolve. These new URIs resolve through the [Australian Government Linked Data Working Group](#)'s redirect services. Additionally, this version adds some metadata, such as class descriptions, and includes a human-readable (HTML) version of the ontology that has been partly auto-generated from the RDF using [pyLODE](#).

This ontology is online in HTML and RDF forms at:
